

Qupid's randomized Hopcroft-Karp sampler vs. uniform sampling

a. Per-matching sampling distribution
M = 165 matchings, N = 100,000 runs,
TV = 0.189, KL = 0.113

b. pseudo-F distribution
 $|\text{mean}(\text{Qupid}) - \text{mean}(\text{uniform})| / \text{mean}(\text{uniform}) = 7.11\%$
